## Great aesthetics designed for the rigors of the Fitness Center.

There's no question that carpeting is the most versatile flooring material available. Its flexibility allows you to create patterns, borders, curves and even logos. The problem with traditional carpet is that it doesn't perform well in a fitness area. That's because most carpet is made of woven fabric that absorbs everything from perspiration, to spills, to grease from your CV machines. It also allows small fibers to get into the gears of your expensive machines, which causes extra strain on the motors and working parts, leading to more maintenance and shorter lives of this equipment.

However, if you could create a carpet that does not utilize these absorbent fibers, then you'd have a material that holds up to the rigors of fitness center use and allows you the design flexibility that comes with carpet. That's just what we've done in producing CarpeTile Sport, utilizing a 100% polypropylene fiber that's warranted for seven full years.

### **It looks and feels like a commercial carpet.**

The soft plastic fibers allow for a multitude of patterns, textures, and colors.

### **It holds up better**

The needle punch technique used in the manufacturing process prevents the fraying and zippering you find with commercial carpets.

### **Completely closed cell weave**

Makes it fast-drying and completely anti-microbial. This prevents it from staining or mildewing, and it won't indent from heavy machinery placed on it.

### **Cleans like a commercial carpet**

Just regular vacuuming and standard shampooing methods will keep your CarpeTiles looking new.

# CARPETile™ Sport

- Easy to maintain
- Versatile design options
- Completely anti-microbial
- Permanently Anti-Static
- Impervious to staining
- Extraordinary long life
- Resists wear patterns
- Will not indent
- Seven year warranty
